Summary

Frontend-focused Full-Stack Developer with **3+ years** of experience, from freelance web development to product teams. I take features from unclear requirements to production — real-time systems, operational dashboards, and payment flows in **React**, **TypeScript**, **Next.js**, and **Node.js** — owning modules end-to-end and coordinating with backend and product. Use **AI-assisted workflows** (agentic coding, custom pipelines) as a core part of how I ship.

Professional Experience

Freelance (Upwork)

Dec 2025 – May 2026

Frontend Developer — AI video-generation platform, 200+ active users/hour.

Role: owned the caching modules and shipped features autonomously inside an existing product team's codebase.

- Delivered new features end-to-end in a live **Next.js** + **TypeScript** codebase with minimal onboarding, coordinating async with a remote product team.
- Diagnosed and fixed video/image caching bugs that caused production rendering failures across async pipelines — **resolved recurring render errors** affecting live users.
- Integrated third-party **AI APIs** and async video-processing workflows with reliable job queuing and retry handling.

Big Studio

Oct 2024 – Oct 2025

Full-Stack Developer (Remote) — Internal delivery-ops SPA for AmRest on Azure: 500–600 couriers, up to **9,000 orders/day** across Poland.

Role: frontend owner of the live tracking and dispatch dashboards, integrating with backend teams.

- Built per-restaurant order tracking and courier dashboards (**React**, **TypeScript**, **Mapbox**) used daily by dispatch operators to manage the full order lifecycle.
- Implemented real-time courier tracking in a **microfrontend** architecture on **Azure** — streamed geolocation synced against live order state, handling concurrent updates without stale UI at 9k orders/day scale.
- Integrated order-sync and dispatching APIs; reconciled concurrent updates so operators always saw a correct, current picture during peak load.

CoinWay

Aug 2023 – Sep 2024

Full-Stack Developer (Remote) — B2B/B2C crypto payment platform: 20+ coins, invoicing, multi-wallet accounting.

Role: fully owned the frontend application — built everything from scratch through to production.

- Built the entire merchant-facing frontend from scratch to production (**React**, **TypeScript**): invoicing, multi-wallet accounting, **analytics dashboards**, and **business/admin modules**.
- Implemented live payment-status updates over **WebSockets** — the tricky part was keeping wallet balances and invoice state consistent as confirmations arrived out of order across 20+ chains.
- Rebuilt a high-drop-off multi-step payment flow: profiled where users abandoned, reworked the UX and validation, **cutting payment failures by [50%]**.
- Developed the **Node.js** API layer for payment endpoints with error handling and retry logic to stay reliable against flaky provider responses.

Freelance (Web Development)

Aug 2022 – Jul 2023

Frontend / Web Developer — client work: landing pages and small business websites.

Role: sole developer, handling the full client cycle from requirements to delivery.

- Built and shipped responsive landing pages and small business sites for clients (**JavaScript**, **PHP**, HTML/CSS).

- Translated designs into pixel-accurate, cross-browser layouts and wired up basic backend / CMS functionality in PHP.
- Managed requirements, delivery, and revisions directly with clients end-to-end.

AI-Assisted Development

- Ship production features with **agentic coding tools** (Claude Code / Cursor) as a daily driver — delegating scoped tasks and reviewing output, not just autocomplete.
- Set up **custom AI workflows and tooling integrations** (e.g. wiring Claude into an editor workflow) and design multi-step / sub-agent pipelines to speed up refactors, test writing, and codebase exploration.

Education

Adam Mickiewicz University, Poznań

Bachelor of Computer Science

Oct 2021 – Feb 2025

Skills

Programming Languages: TypeScript, JavaScript

Frontend: React, Next.js, Redux, TailwindCSS, modern CSS

Backend: Node.js, NestJS, Express, PostgreSQL, MongoDB, Redis, Kafka, RabbitMQ

Tools & Practices: Docker, Git, Linux/Unix, REST, WebSockets, Mapbox, Azure, Jira, AI-assisted development

Languages

English (B2)

|

Polish (C1)

|

Russian (Native)
